INDEX FOR VOLUME XXXIII

JANUARY 1 TO JUNE 30, 1911

Explanatory Note.

Illustrated articles are marked with an asterisk (*). Book notices are denoted by a dagger (†). Cross references to a particular initial word may apply to any cognate word beginning in the same way. Thus, a reference from "Oil" to "Lubricant" would relate equally to "Lubricating," "Lubrication" or "Lubricator." The cross references condense the matter and assist the reader, but are not to be regarded as conclusive. So, if there were a reference from "Boiler" to "Furnace" and if the searcher failed to find the required article under the latter word, he should look through the "Boiler" entries, or others that the topic might suggest, as he would have done had there been no cross reference. Letters are indexed under title or subject, general articles under writer's name as well. Not all articles relating to a given topic necessarily appear under the same entries.
